

## **Netinium, enersuisse and ewz join forces to strengthen vendor-independent smart metering in Switzerland**

**Strategic cooperation to safeguard continuity, innovation and operational resilience for the Swiss energy transition**

---

**WORMER (NL) / ZÜRICH (CH), 11 June 2026** – Netinium, a globally recognised provider of vendor-agnostic smart metering and smart energy software, today announced a strategic cooperation with **enersuisse AG** and **ewz (Elektrizitätswerk der Stadt Zürich / Zurich Municipal Electric Utility)**, two established players in the Swiss energy sector. Both companies already use Netinium’s technology. Through this partnership the three parties will work together to advance open, interoperable and vendor-neutral metering infrastructure in the Swiss market.

Designed as a long-term industry partnership, the cooperation focuses on securing efficient and reliable operations for Swiss utilities, reducing dependency on proprietary vendor systems, and innovating together on new use cases for smart metering and grid data.

### **A timely partnership for the Swiss market**

With around 90 million smart meters expected to be deployed across Europe between 2025 and 2029 - many of them replacements - utilities increasingly seek vendor-agnostic solutions that avoid lock-in, scale with evolving security and regulatory requirements, and unlock the full value of their metering data, including near-real-time power quality data for active grid management.

Netinium’s AMM+ Head End System is independent of meter manufacturers and integrates with multiple meter brands and IT systems, with a proven track record in large-scale deployments. Working closely with enersuisse and ewz, the parties aim to keep developing this open, vendor-neutral foundation for the Swiss market and beyond.

### **What the partners say**

*“Switzerland is a key strategic market for us, and vendor independence is a critical requirement for utilities as they modernize their metering infrastructure. Collaborating closely with enersuisse and ewz —both experienced users of our platform—enables us to further develop an open, future-proof Head End System. This partnership helps utilities meet the growing challenges of delivering secure and reliable energy while creating a flexible platform that supports innovation and accelerates the energy transition.”*

— **Ferry Cserep, CEO, Netinium**

*“Our cooperation with Netinium reflects a shared conviction: critical metering infrastructure should remain open, interoperable and free from vendor lock-in. By deepening this partnership, we create real opportunities to innovate together and deliver tangible benefits to our utility customers as they navigate the demands of a rapidly changing energy landscape.”*

— **Martin Leuenberger, CEO, enersuisse AG**

*“As a public utility, ewz benefits from a secure, vendor-neutral smart metering platform. It strengthens the efficiency and long-term flexibility of ewz in the city of Zurich and in parts of Grisons and thus for its customers. By using the platform, ewz benefits from the value of a vendor-neutral approach: greater freedom of choice, seamless technology integration and*

### **About Netinium**

Netinium B.V. is a provider of next-generation, vendor-agnostic smart metering and smart energy software. Its AMM+ Head End System gives utilities a robust, secure and future-proof platform to manage large-scale metering deployments across electricity, gas, water and heat, independent of any single meter manufacturer. Netinium has a proven track record in large-scale rollouts in Europe. More information: [www.netinium.com](http://www.netinium.com).

### **About enersuisse**

enersuisse AG is a leading service provider in the Swiss energy market. Operating Switzerland's largest shared services platform for energy utilities, enersuisse covers the full value chain around metering, billing, customer service and payment processing. enersuisse operates large-scale smart metering systems and contributes directly to the implementation of Switzerland's Energy Strategy 2050. Combining deep industry expertise with a strong service culture, enersuisse enables utilities to focus on their core business while benefiting from scale, innovation and operational excellence. More information: [www.enersuisse.ch](http://www.enersuisse.ch)

### **About ewz**

#### **ewz – more than electricity**

ewz is a leading provider of energy and telecommunications solutions. It supplies electricity to the City of Zurich and parts of Grisons and operates the city-wide fibre-optic network in the city of Zurich. ewz generates 100% renewable electricity from hydro, wind and solar power plants in Switzerland and abroad. The company employs 1,430 people and generated revenue of CHF 1.443 billion in 2025. More information: [www.ewz.ch](http://www.ewz.ch)
